Assignment Two:
Data Science Fundamentals
Summer 2020

Your second assignment aims to build your skills for sharing your work in R, and presenting your code and results with external audiences. For this assignment, you will (1) create your first R Markdown document, and (2) present the number of variables and the number of observations from your Homework One dataset.

For this assignment:

1. Create an R Markdown document by using the dropdown in RStudio.

2. Update the document to reflect your particular assignment and data source.

3. Using your code from Homework One, load your dataset.

4. Write a short paragraph describing your data. This should include printing the number of observations (hint: the number of rows) and the number of variables (hint: the number of columns).

As always, if you are encountering problems, please post questions to Slack or reach out directly to me.

DUE: You should email me a copy of the .rmd file and an associated output at `drrice@umass.edu` by 11:59 p.m. EST on **Monday, August 10th**.
